

Adam Reyes

Senior Front-End Engineer & React Architect

Berlin, Germany • hello@adamreyes.dev • github.com/adamreyes • linkedin.com/in/adamreyes

PROFILE

Front-End Engineer with six years of experience building fast, accessible, and meticulously crafted React interfaces. I turn complex product requirements into design systems and rendering layers that teams enjoy maintaining. Obsessed with perceived performance, motion semantics, and component composition.

EXPERIENCE

Senior Front-End Engineer — Northlight Systems

2023 — Present

- Own the design system and rendering layer of a 400k-LOC React application serving 2M+ monthly users.
- Reduced Time-to-Interactive by 46% through route-level code splitting, suspense boundaries, and a virtualised data grid.
- Established component primitives, token-driven theming, and CI bundle budgets adopted across five product squads.

Front-End Engineer — Kestrel Labs

2021 — 2023

- Built the customer-facing analytics suite with real-time charting, optimistic mutations, and offline-first caching.
- Designed a hand-rolled request layer that cut API payload sizes by 34% and eliminated duplicate network calls.
- Mentored two junior engineers on React patterns, testing strategy, and accessibility best practices.

UI Developer — Freelance

2019 — 2021

- Delivered twenty-plus marketing sites and web applications for studios across Europe.
- Developed a motion-first workflow with GSAP and custom shaders that became a signature of the studio's output.
- Maintained 98+ median Lighthouse scores on production builds through aggressive lazy-loading and asset optimisation.

EDUCATION

BSc Computer Science — TU Berlin

2019 • Graduated with distinction. Thesis on perceived performance of animated interfaces.

Interaction Design Certificate — Interaction Design Foundation

2020 • Motion, micro-interaction and accessibility specialisation.

SKILLS & TOOLS

Core: React, TypeScript, JavaScript (ES2024), HTML5, CSS3, Tailwind CSS, Next.js, TanStack Router & Query

Performance: Lighthouse, Web Vitals, bundle analysis, code splitting, virtualisation, GPU-composited animation

Systems: Design tokens, component libraries, Storybook, accessibility (WCAG), CI/CD, Git, GitHub Actions

Data: REST APIs, GraphQL, WebSockets, optimistic updates, caching strategies

SELECTED METRICS

6+	Years shipping production React
42	Products delivered
98	Median Lighthouse score
1.2s	Average LCP on shipped projects
